ARCHITECTURAL HIGHLIGHTS

Windows and doors for your dream home

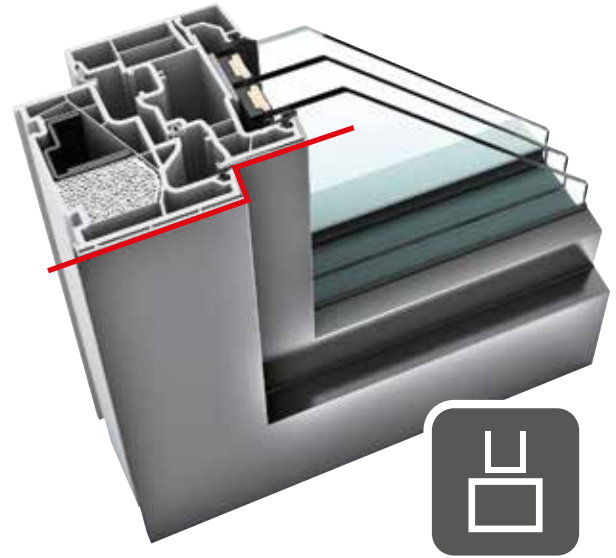

Architecture is as diverse as the people that live within it. The right windows and doors will add significant character to your home.

Internorm windows and doors allow you to create your individual living space by offering bespoke solutions tailored to your unique requirements. To find the ideal glazing for your project, you can choose from a wide range of colours, materials and accessories, Internorm products also come in four distinct design styles to enhance any architectural design: [studio](#), [home pure](#), [home soft](#) and [ambiente](#).

studio

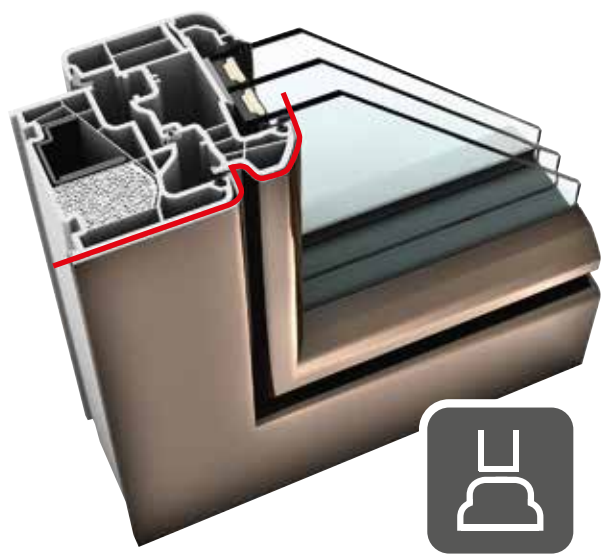

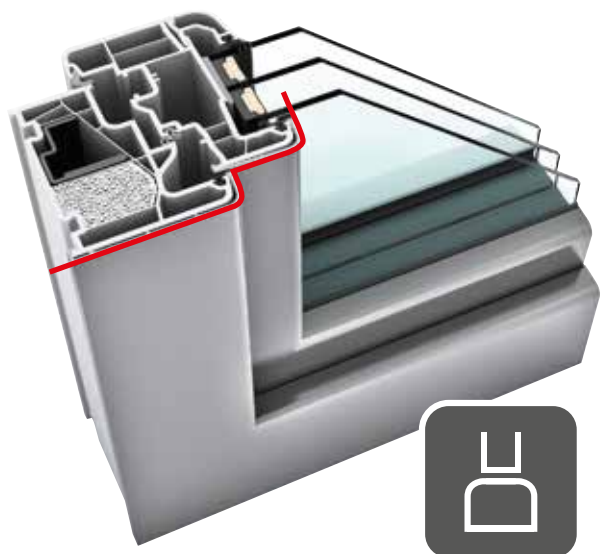

The **studio** design style is characterised by clean lines and a minimalist design. The windows become a design feature in their own right, whilst enhancing exceptional architecture.

home pure

The modern **home pure** window with its square edge design perfectly blends into the unique architecture of contemporary buildings.

home soft

The elegant round edge design of a home soft window creates a timeless look that can be integrated effortlessly into any design and architecture.

ambiente

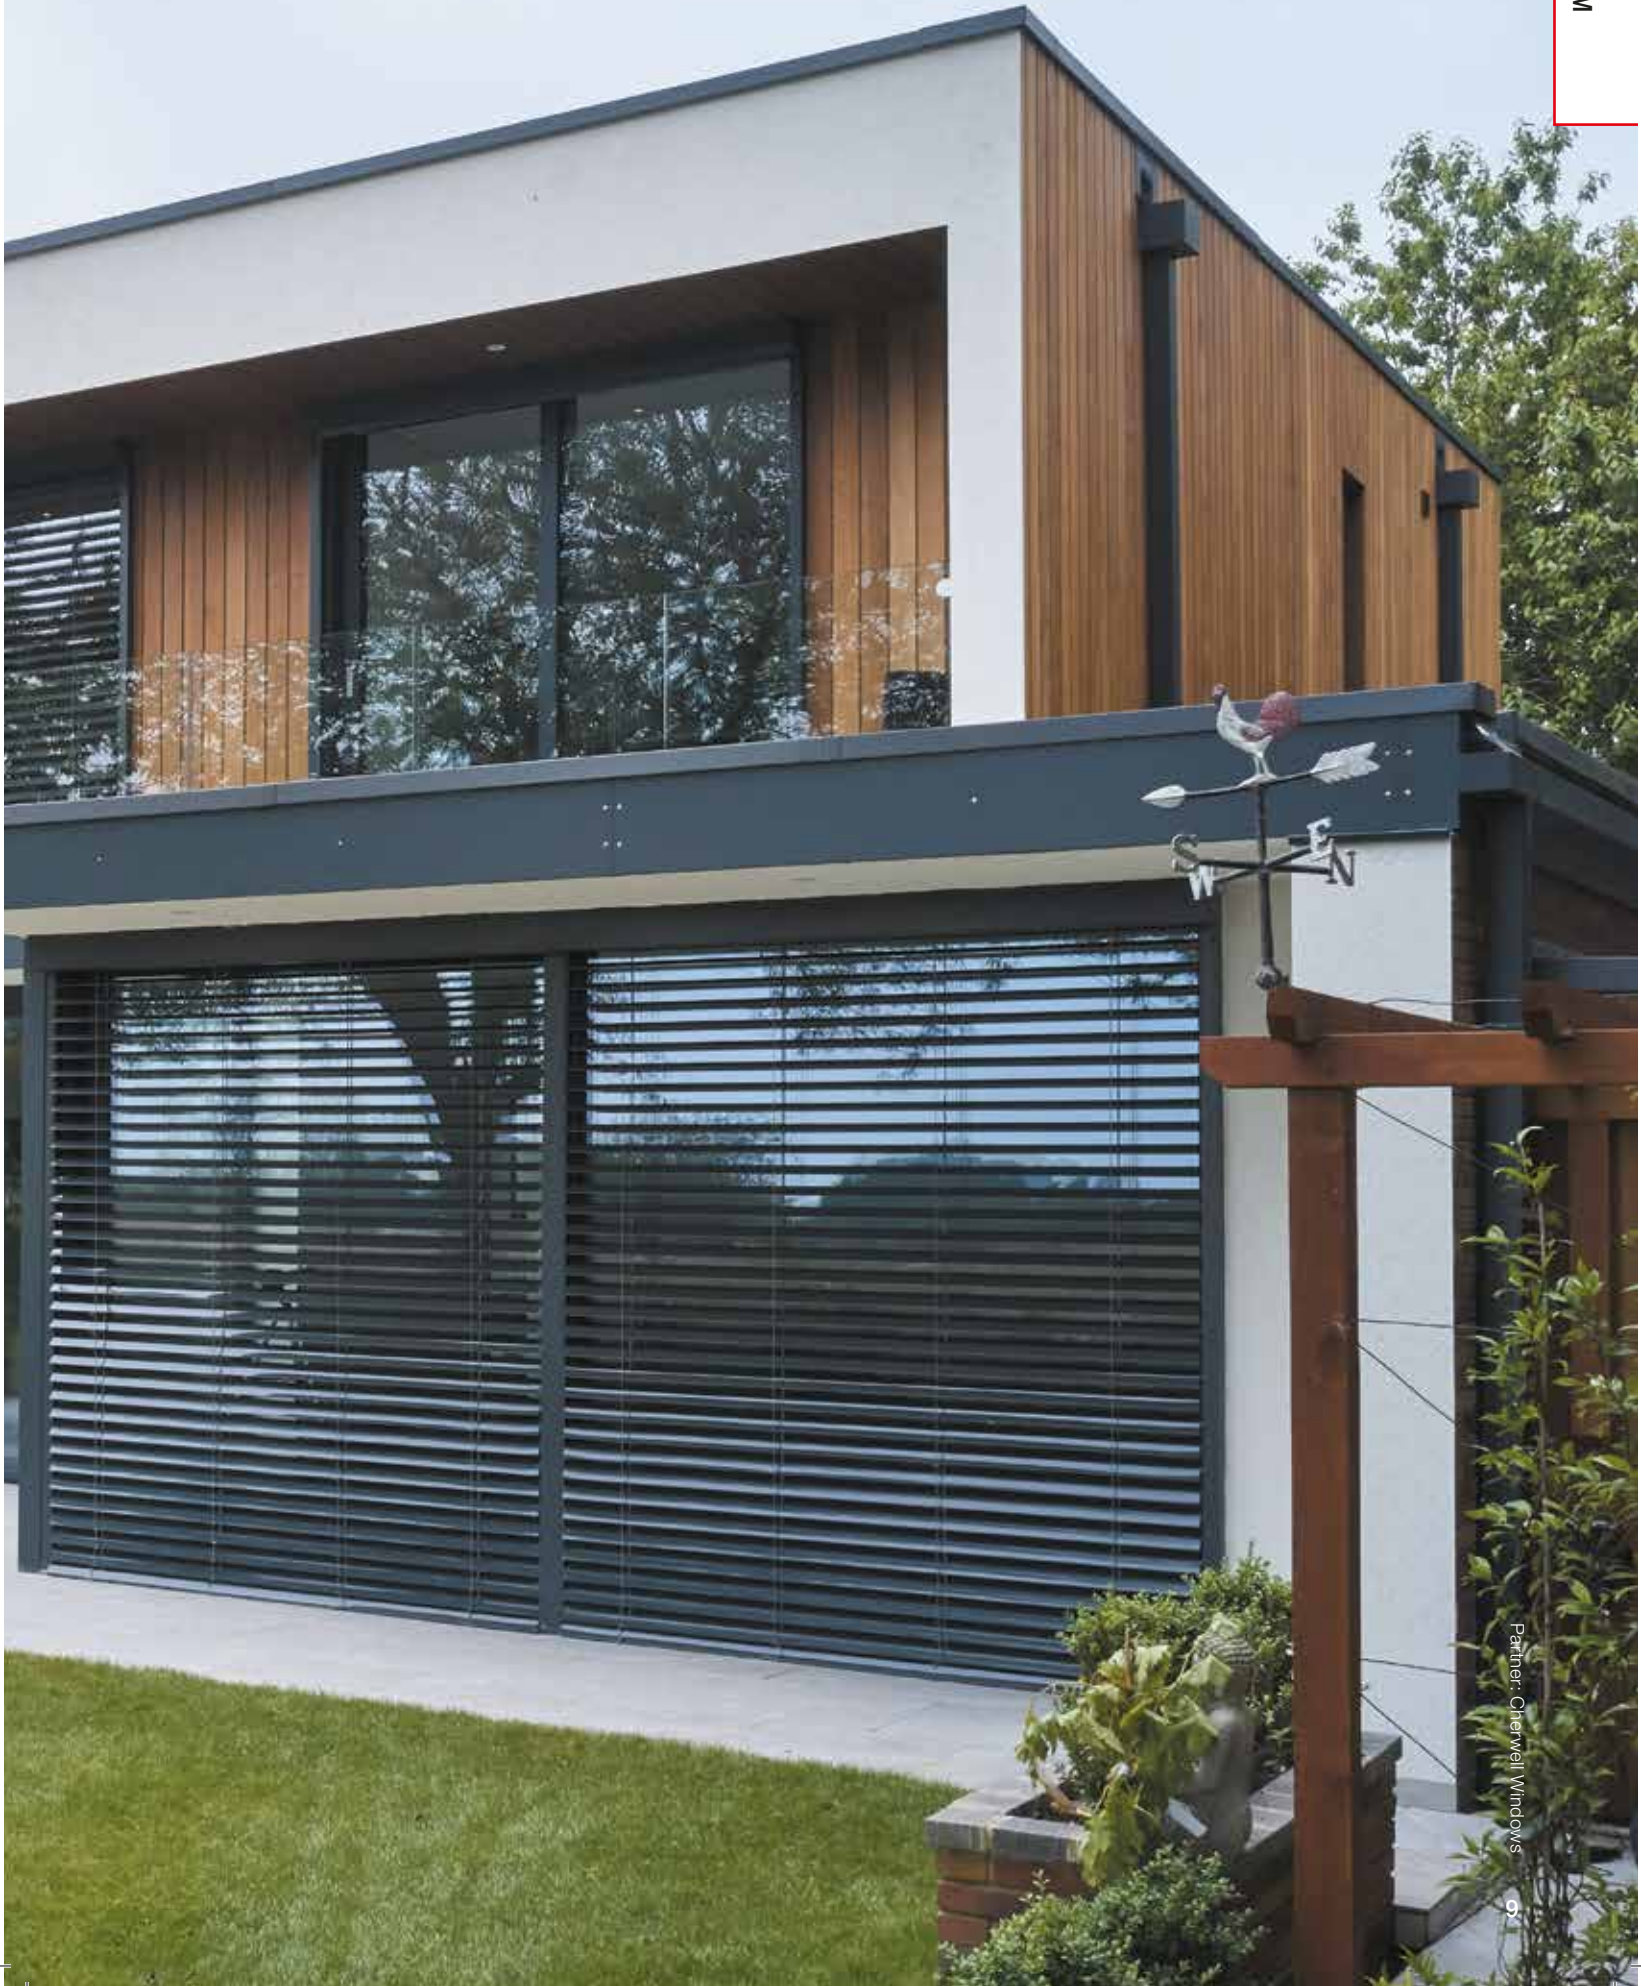

An ambiente window offers the perfect blend of traditional design and classic detailing. The round profiled edges add a special charm to any façade.

UPVC & UPVC-ALUMINIUM

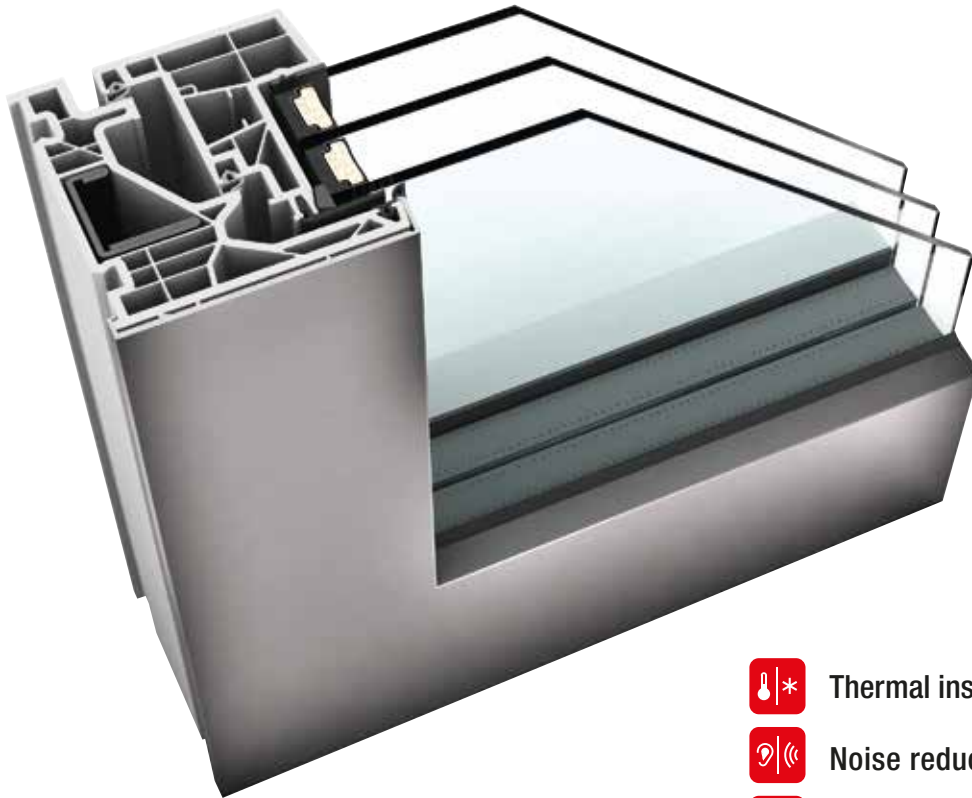

CONTEMPORARY. CLEAN. VERSATILE.

KF 520

UPVC & UPVC-ALUMINIUM WINDOW

I-tec Glazing

I-tec Secure

studio

-  **Thermal insulation** U_w as low as 0.63 W/(m²K)
-  **Noise reduction** up to 46 dB
-  **Security** up to RC2, RC3
-  **Locking** fully integrated
-  **Construction depth** 90/93 mm

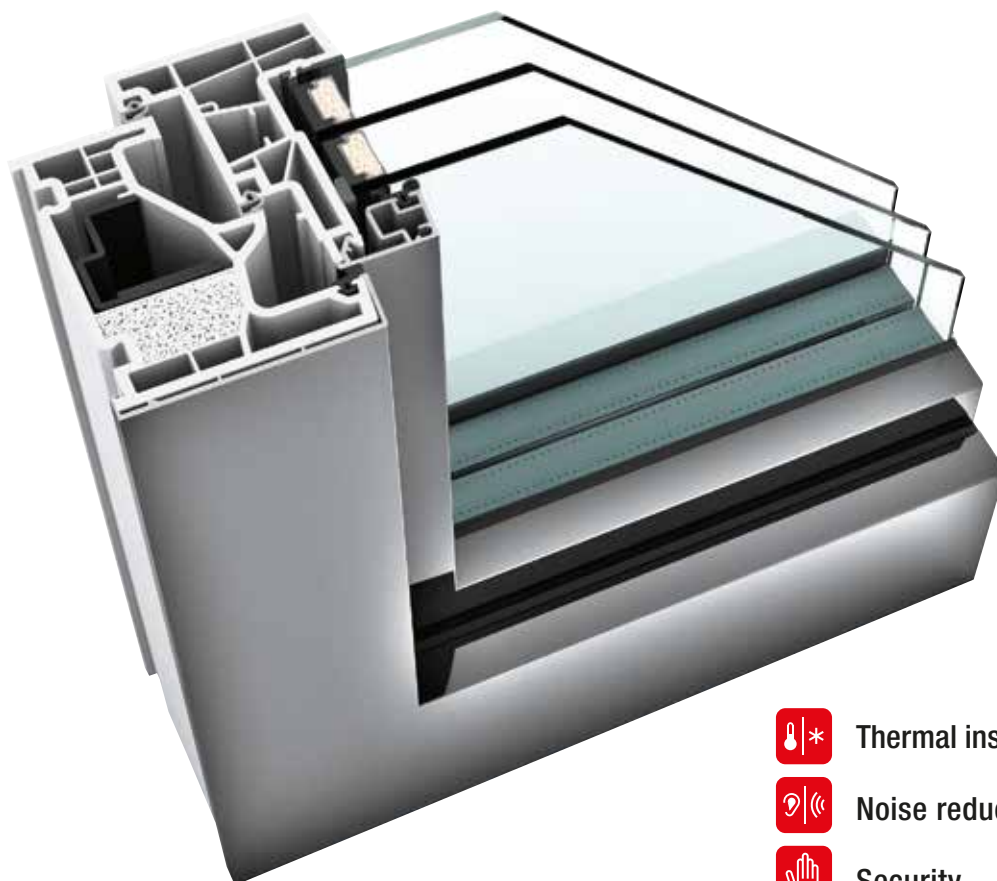

KF 520

Ideal for modern architecture, this innovative window system looks like fixed glazing from the outside but functions like a normal window. The revolutionary I-tec Secure can achieve the highest RC3 security rating, making it one of the most secure windows on the market.

KF 510

UPVC & UPVC-ALUMINIUM WINDOW

I-tec Glazing

I-tec Secure

home pure

-  **Thermal insulation** U_w as low as 0.63 W/(m²K)
-  **Noise reduction** up to 46 dB
-  **Security** RC2, RC3
-  **Locking** fully integrated
-  **Construction depth** 90/93 mm

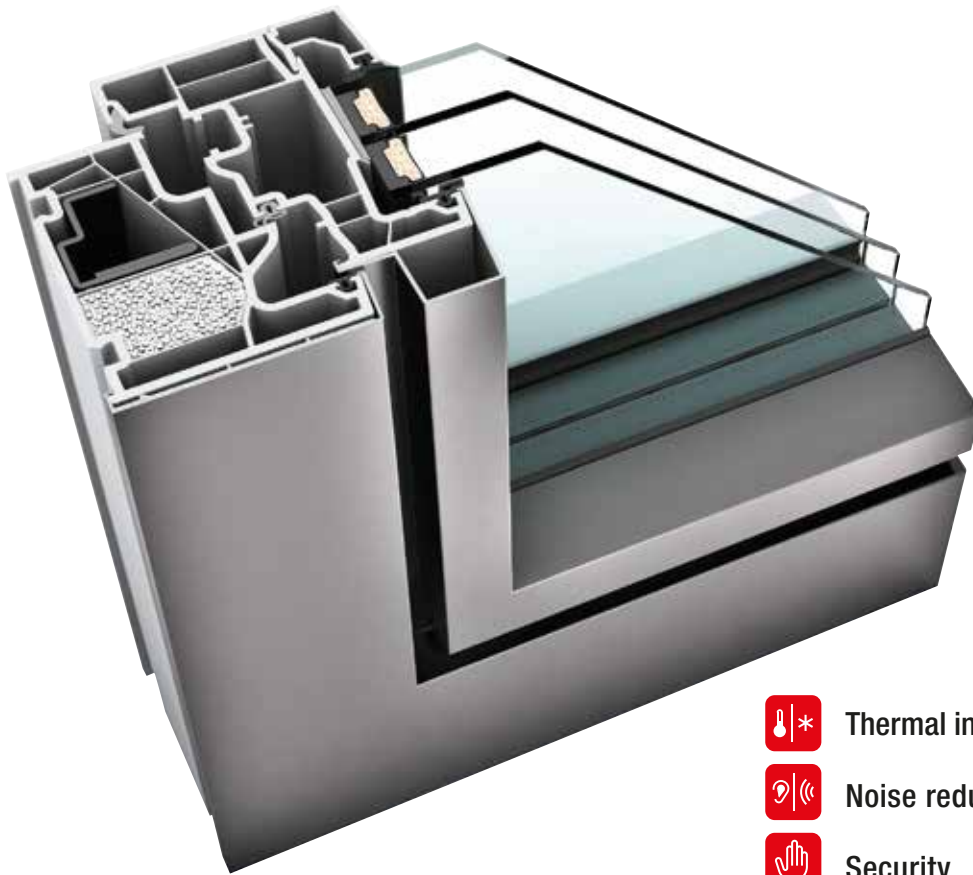

KF 510

The particularly slim and modern frame of the KF 510 results in an even larger area of glazing to allow maximum light transmission and improved living. The fully integrated I-tec Secure system provides enhanced security thanks to the patented flap mechanism, which presses into all four sides of the frame when locking, making it virtually impossible to lever the window. The concealed hardware also makes it easy to clean, and combined with I-tec Insulation and I-tec Glazing, the new KF 510 offers the ideal window solution.

-  **Security** up to RC1N, RC2
-  **Locking** concealed
-  **Construction depth** 90/93 mm

studio

KF 410

The popular KF 410 is available in all four design styles and is therefore suitable for all types of architecture. I-tec Insulation, which includes insulating granulate that evenly fills the hollow chambers, provides considerable improvement in thermal performance. Also available with I-tec Ventilation to achieve ideal room temperature and living conditions.

KF 310

UPVC & UPVC-ALUMINIUM WINDOW

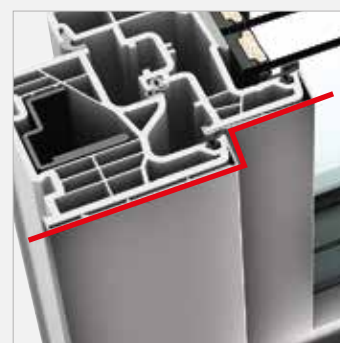

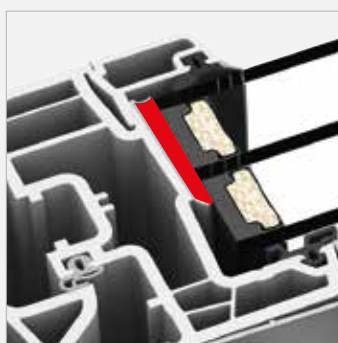

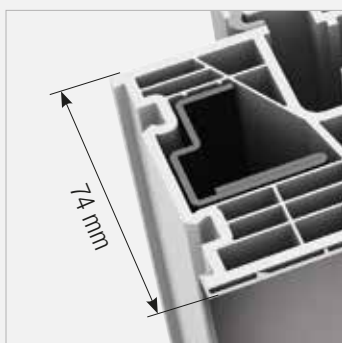

I-tec Glazing

home soft

home pure

-  **Thermal insulation** U_w as low as 0.69 W/(m²K)
-  **Noise reduction** up to 45 dB
-  **Security** up to RC1N, RC2
-  **Locking** concealed
-  **Construction depth** 71/74 mm

KF 310

This sleek window features our proven Internorm technology and provides exceptional thermal insulation and noise reduction performance. The KF 310 is also available as a balcony or patio door with an integrated Juliet balcony. Choose from a wide selection of aluminium colours, glazing and handle options.

KV 440

UPVC-ALUMINIUM WINDOW WITH INTEGRATED BLIND

I-tec Glazing

I-tec Shading

I-tec Ventilation

I-tec Insulation

I-tec Connect

home soft

ambiente

home pure

-  **Thermal insulation** U_w as low as 0.64 W/(m²K)
-  **Noise reduction** up to 45 dB
-  **Security** up to RC1N, RC2
-  **Locking** concealed
-  **Construction depth** 93 mm

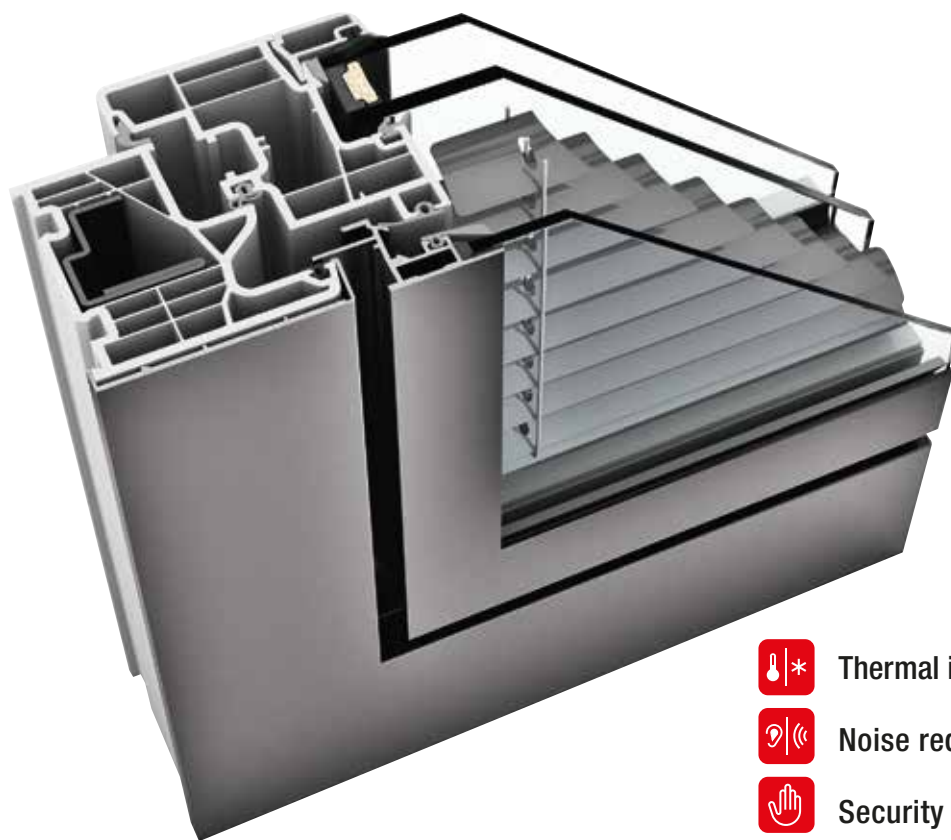

KV 440

With the KV 440, the blind is fully integrated between accessible glass panes and is therefore protected from wind, rain and dirt, whilst still offering outstanding thermal performance with I-tec Insulation. Available with Venetian, Roman and Duette blinds in a selection of colours, the KV 440 offers privacy and sun protection, even for renovations or facades where roller shutters are not possible. The I-tec Shading option offers operation of the blinds via a photovoltaic module using solar energy, therefore not requiring an external power source.

KV 350

UPVC-ALUMINIUM WINDOW WITH INTEGRATED BLIND

I-tec Glazing

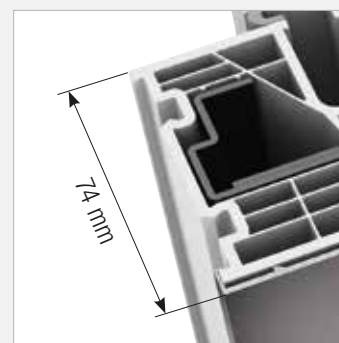

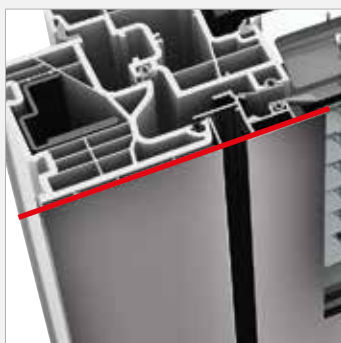

I-tec Shading

I-tec Connect

ambiente

home pure

-  **Thermal insulation** U_w as low as 0.79 W/(m²K)
-  **Noise reduction** up to 44 dB
-  **Security** up to RC1N, RC2
-  **Locking** concealed
-  **Construction depth** 74 mm

KV 350

This stylish and slim window, with a construction depth of only 74mm, benefits from integrated, accessible blinds between glass panes. Providing sun protection and privacy, and available with different blind options, the KV 350 can be perfectly matched with the KF 310 uPVC-Aluminum window. The 6-chamber frame profile, combined with the I-tec Glazing, offers improved thermal performance, noise reduction, as well as protection from damp entering the cavities.

KS 430

UPVC & UPVC-ALUMINIUM LIFT & SLIDE DOOR

NARROW

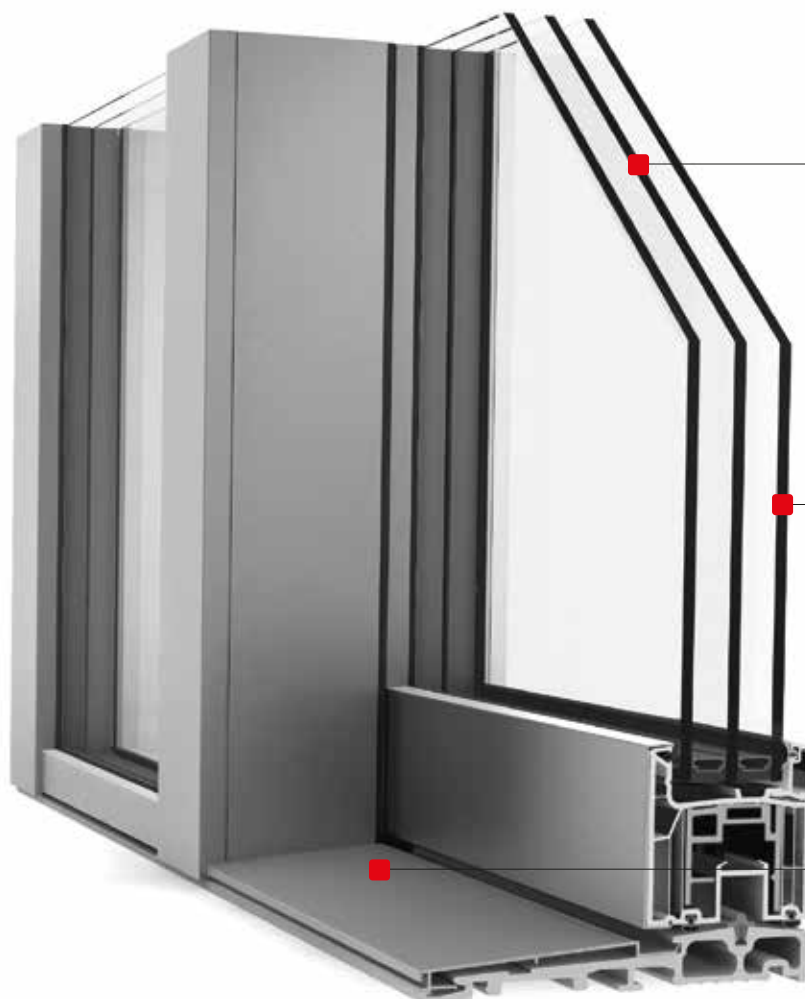

Narrow sliding frame and frameless elements with 3-sided rendering

COMFORTABLE

Low threshold without obstruction

SOFT

Soft handle closure as standard

I-tec Connect

More light from large glazing up to 650 x 280cm. Sash up to 400kg.

ESG toughened glass as standard to prevent injury.

The low threshold provides comfortable access and makes it suitable for barrier-free construction.

Comfort Drive allows your lift & slide door to be opened via electric operation. Can be integrated into a Smart Home system.

Thermal insulation up to $U_w = 0.64 \text{ W}/(\text{m}^2\text{K})$

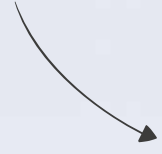

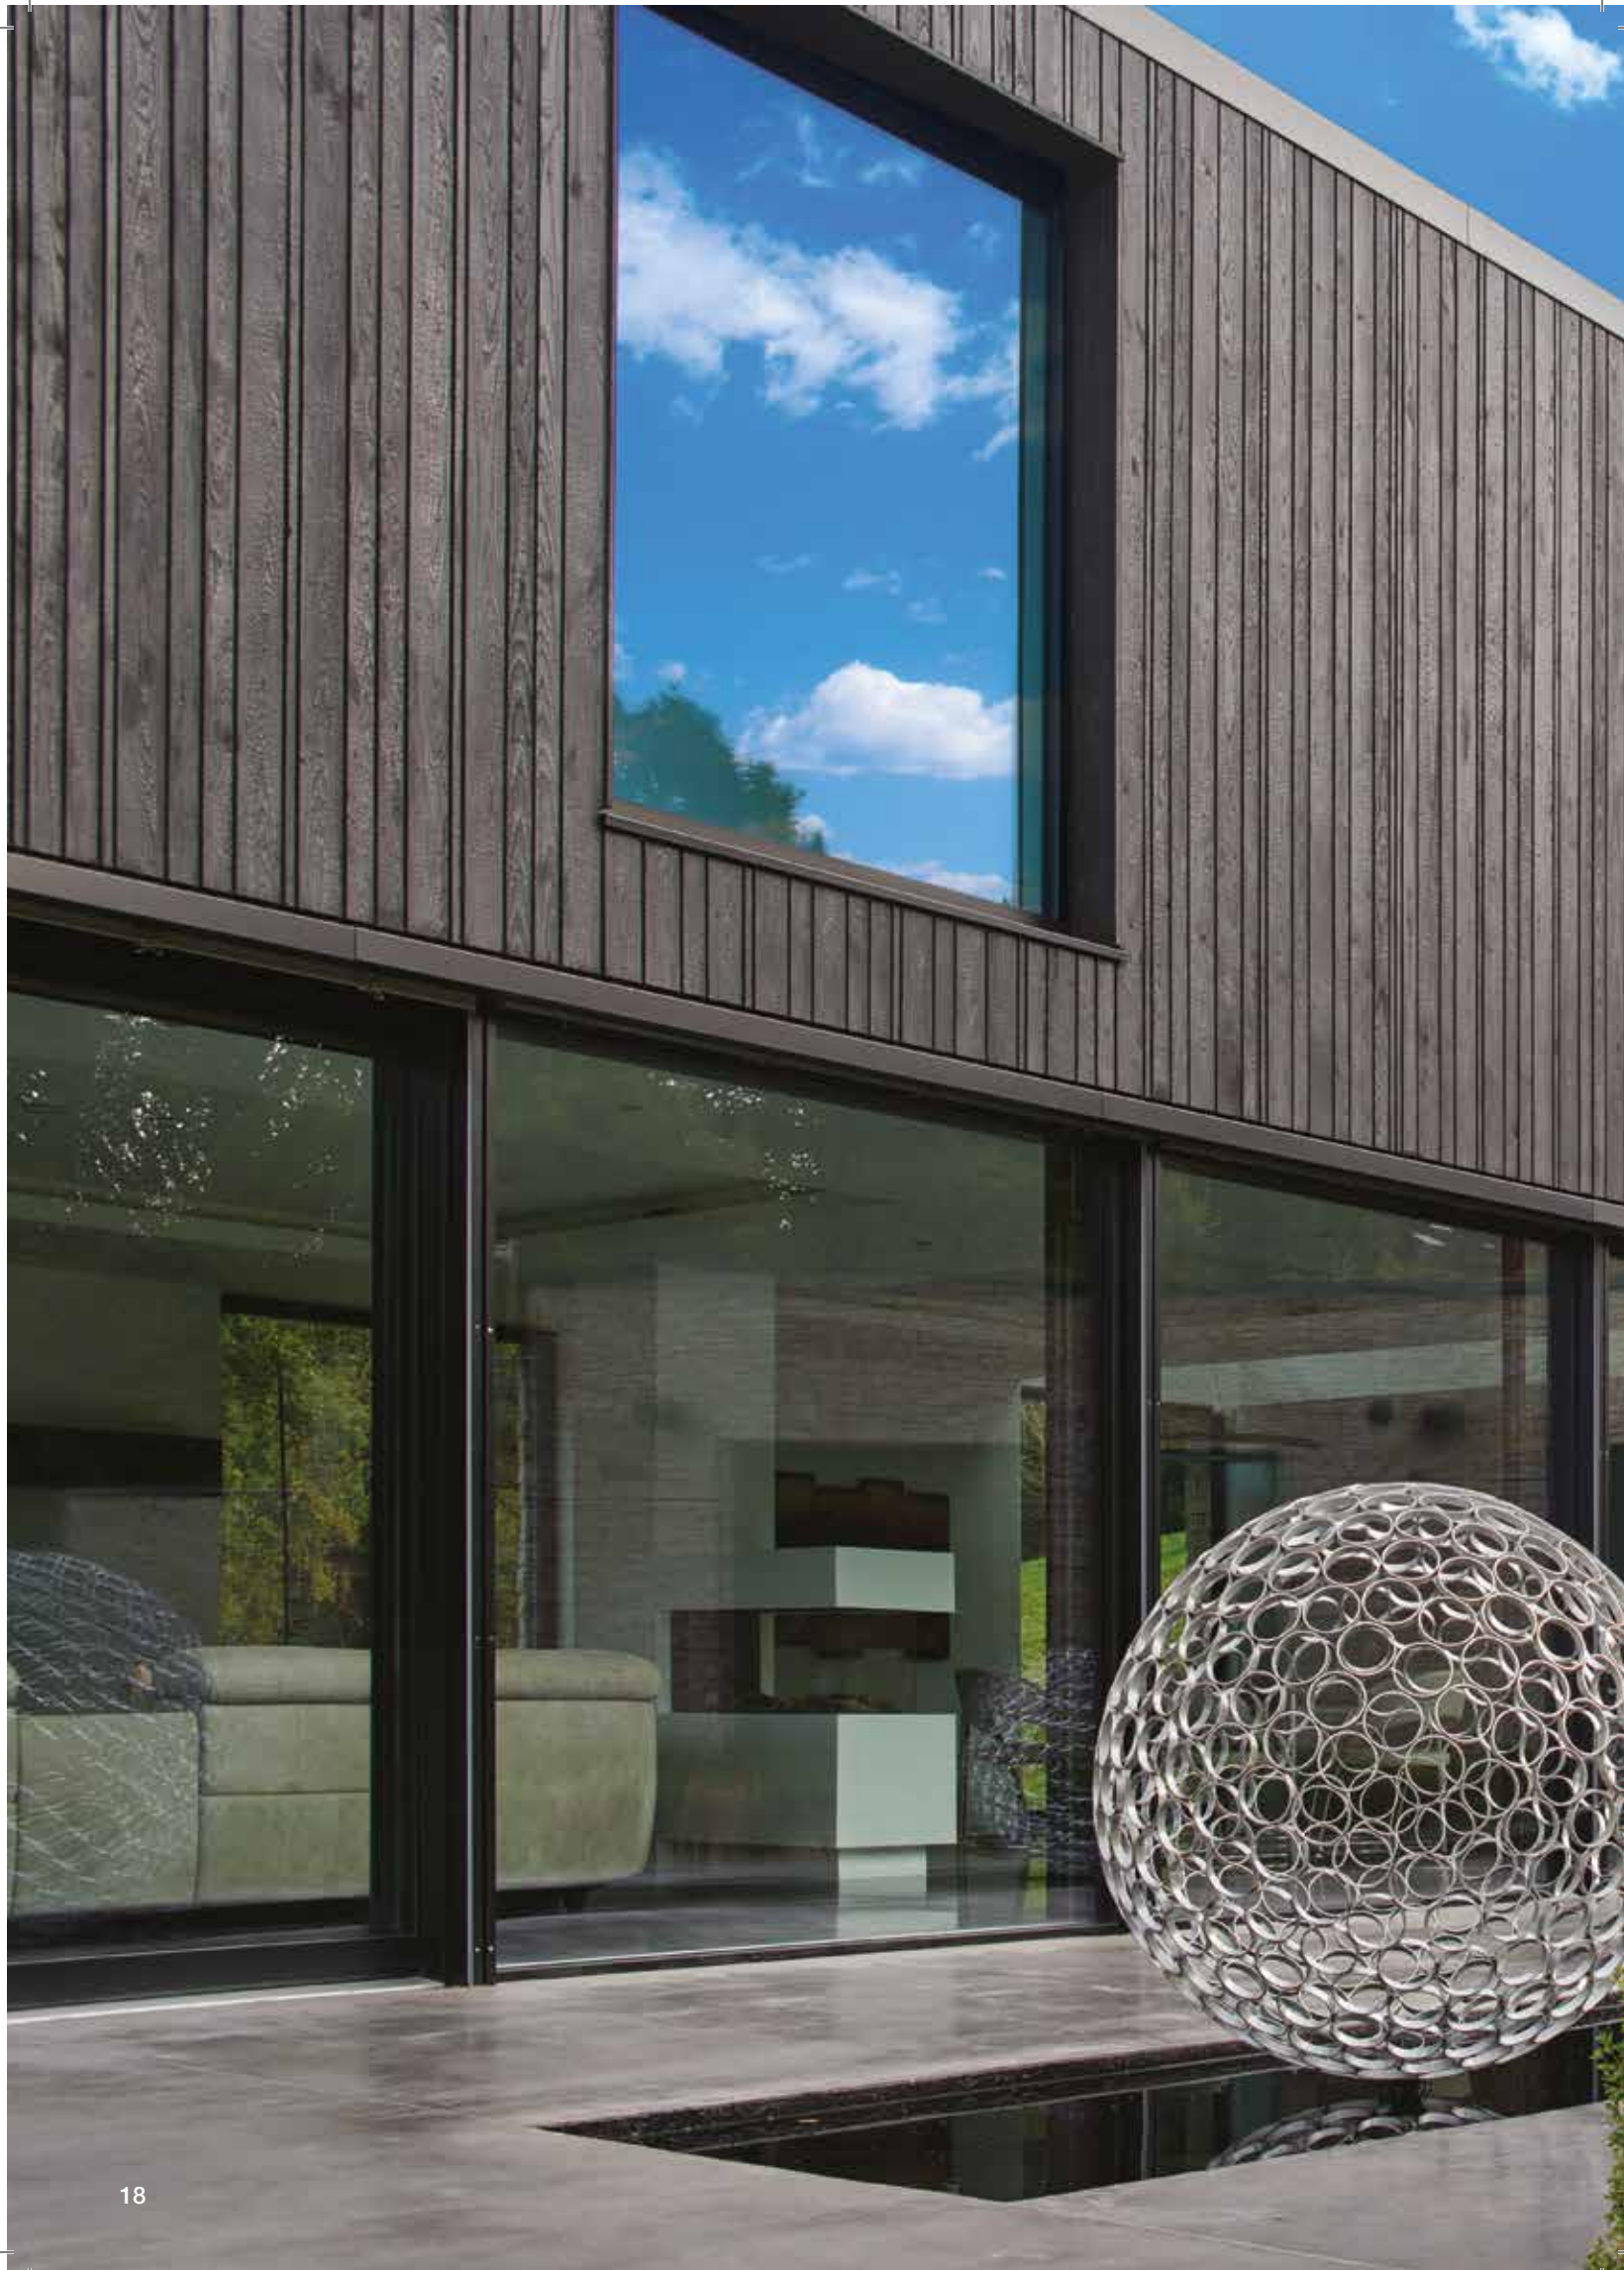

Noise reduction up to 43 dB

Security up to RC1N, RC2

*Create light and space
with large Lift & Slide doors*

TIMBER-ALUMINIUM

STYLISH. MODERN. SUSTAINABLE.

HF 510

TIMBER-ALUMINIUM WINDOW

NEW

-  **Thermal insulation** U_w as low as 0.65 W/(m²K)
-  **Noise reduction** up to 43 dB
-  **Security** up to RC1N, RC2
-  **Locking** concealed
-  **Construction depth** 85 mm

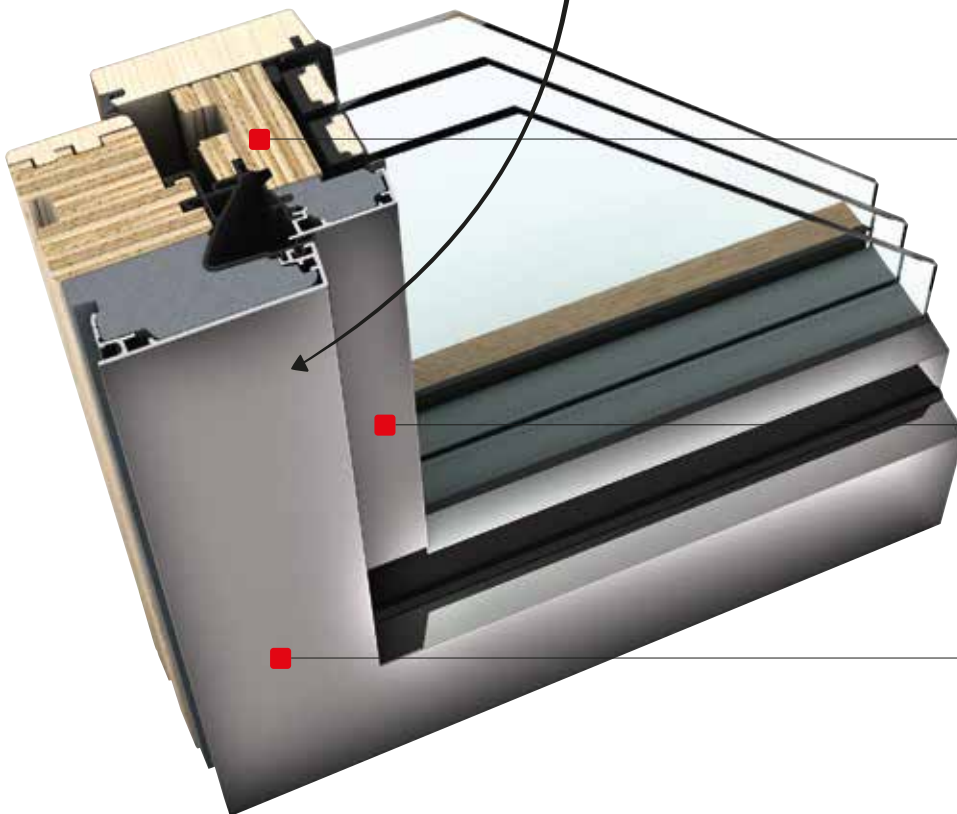

*Rendering or over-cladding
will achieve slim sightlines.*

I-tec Core

I-tec Glazing

The I-tec Core makes this window exceptionally robust and stable, therefore making larger windows solutions possible. (I-tec Core pg. 43)

Slim, modern frame and even larger areas of glazing for increased light penetration and more comfortable living.

The square, linear features of the sash and frame make design style home pure the ideal window for modern architecture.

-  **Noise reduction** up to 45 dB
-  **Security** up to RC1N, RC2
-  **Locking** concealed
-  **Construction depth** 85 mm

HF 410

The unique I-tec Core technology of thin, laminated timber layers, makes the HF 410 exceptionally stable and robust, allowing the manufacture of even larger window sizes. The combination of timber, insulating foam and aluminium cladding provides superior thermal performance. Sustainably sourced timber options and a wide choice of colours offers unlimited interior design possibilities.

HV 450

TIMBER-ALUMINIUM WINDOW WITH INTEGRATED BLIND

-  **Noise reduction** up to 46 dB
-  **Security** up to RC1N, RC2
-  **Locking** concealed
-  **Construction depth** 85 mm

HV 450

The thermally efficient HV 450, with blinds integrated between accessible glass panes, offers quadruple protection: sun, privacy, thermal and noise. With a choice of styles and colours, the integrated blinds are protected from wind, rain and dirt. The I-tec Shading solution offers operation of the blinds via a photovoltaic module using solar energy, therefore not requiring an external power source. Also available as hard wired or manual operation. Internorm shading options can be integrated into a Smart Home system.

HS 330

TIMBER-ALUMINIUM LIFT & SLIDE DOOR

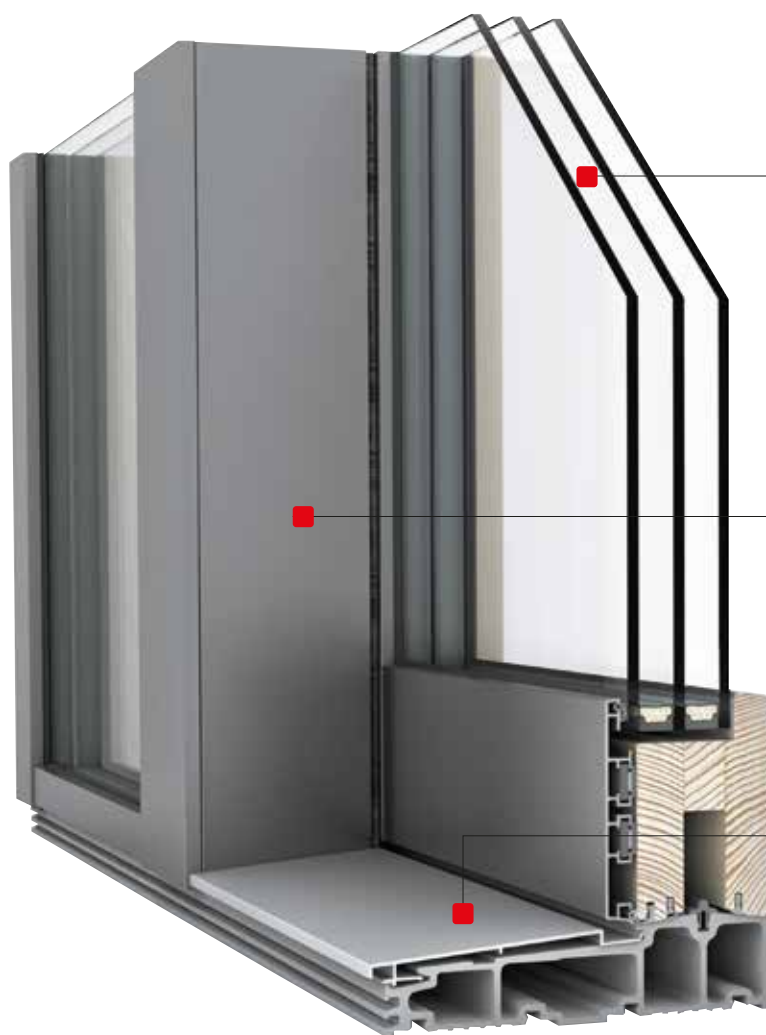

ENERGY-EFFICIENT FRAMELESS

Fibreglass threshold for optimum thermal insulation

Frameless glazing achieved with fully rendered fixed elements

COMFORTABLE

Easy to lift and slide up to 400kg sash weight

I-tec Glazing

I-tec Connect

Can be combined with fixed glazing for even large glazed areas.

Stylish external colour options – can be perfectly combined with the timber-aluminium windows HF 410, HF 510 and HV 450.

Energy-saving, low fibreglass threshold for optimal thermal insulation and stability.

Comfort Drive allows your lift & slide door to be opened via electric operation. Can be integrated into a Smart Home system.

 **Thermal insulation** up to $U_w = 0.73 \text{ W}/(\text{m}^2\text{K})$

Renovations...

TRANSFORM YOUR HOME WITH
INTERNORM TRIPLE GLAZING

This period property is a fantastic example of Internorm windows and doors being integrated into more traditional architecture. The original section of this stunning property in Hertfordshire was built in 1904 and extended over time. The previous golden oak uPVC double-glazed windows were replaced by Internorm triple-glazed Timber-Aluminium windows and French doors. The old uPVC bi-fold doors at the rear stopped functioning fully and the vertical bars took a lot of the light away from the kitchen area and the old bi-fold doors were replaced by our large lift & slide doors, which instantly brightened the interior and made a huge difference to the home.

With its integrated Georgian bars, the Internorm composite windows look like the originals from over 100 years ago but with the benefits of superior technical performance you get from Internorm products. As this property is situated near a busy road, the triple glazing made an enormous difference to the noise reduction and together with the I-tec Glazing dramatically improved the security of the property. The homeowner was delighted:

"Having recently had our windows and bifold doors replaced throughout our property with Internorm triple glazed units, any doubts about the value for money have gone entirely, now that I've experienced the product installed. Aesthetically the windows have transformed our property, but there are so many other benefits. I put a premium on security, and these are second to none. We enjoy more light into rooms with large expanses of glass and less obtrusive frames than we had before and the improvement in sound insulation – from relatively new double glazed uPVC units previously – is well beyond anything I expected."

Products installed: Timber-Aluminium HF 410 windows + French doors, HS 330 Lift & Slide Doors with Georgian bars.

Colours: Interior timber factory painted in Traffic White RAL9016. Exterior aluminium cladding in Jet Black RAL9005.

Speak to your local Internorm partner to see how your home can be transformed.

PERFECT COMBINATIONS

TRUE TO STYLE. INDEPENDENT OF MATERIALS. MATCHING.

Individual architecture increases the demand on window design, energy efficiency and comfort. With Internorm, functionality and design are not a contradiction. It is possible to perfectly mix and match uPVC-aluminium and timber-aluminium in one project.

Same design on the outside – choose between uPVC and timber on the inside

If you prefer a uPVC-aluminium window in the bathroom due to high humidity, but prefer the feel and look of a timber-aluminium window in the living room – no problem. The design style and exterior finish of your windows will look and remain the same. The difference is on the inside where you can choose between classic uPVC or natural timber.

Consistent architectural style throughout

No matter what design style you choose for your home - avant-garde, contemporary, traditional or timeless – Internorm offers you the perfect solution for combining materials and products to suit your particular need.

Combine with lift & slide doors

To ensure that you don't miss out on large scale glazing and more light in your home, you can even choose your lift & slide doors in uPVC-aluminium and timber-aluminium to match your windows to achieve a uniform look.

OUTSIDE – THE SAME

Aluminium

The aluminium cladding on the outside matches the design style of your house.

INSIDE – YOUR CHOICE

uPVC

uPVC is longlasting, maintenance free and perfect for rooms with high humidity, e.g. bathrooms.

Timber

Timber has a natural, warm feel and is ideal for living spaces and bedrooms.

JULIET BALCONY

EVEN SMALLER ROOMS FEEL MORE SPACIOUS.

Balconies and terraces are no longer as popular as they once were and often not an option in city centres for structural reasons. However, large glass areas are integral to modern architecture.

Juliet balconies are the perfect solution for letting more light into a room, providing uninterrupted views, and creating beautiful design features. Made with laminated safety glass and stainless steel trim, Internorm's Juliet balconies are uniquely integrated into the door frame and factory fitted.

Please ensure that minimum heights comply with Building Regulations to prevent falling.

Juliet balcony options

Option with laminated safety glass balustrade, including stainless steel trim

Option with round stainless steel rail

Option with square stainless steel rail

SUN AND INSECT PROTECTION

MIX & MATCH. INTEGRATED. MANY VARIATIONS.

Sun and insect protection can be combined with the window systems to provide added functionality and to enhance the facade of your house. They can also be integrated into your Smart Home system and conveniently controlled from your smartphone or tablet.

Integrated blinds: Sun and privacy protection integrated between glass panes. Choose from Roman, Venetian or black-out Duette blinds, also available with solar powered I-tec shading.

Internal blinds: Mounted on the window sash, it can be colour matched to the internal window frame.

Raffstores: Optimum control of light and solar gain with adjustable slats. Optional RETROLux louvres. Can be combined with fly screen. Ideal for lift & slide doors.

Internal Venetian blinds: Optimum control and guidance of light and warmth through adjustable slats. Can be combined with insect protection.

External roller/mini-roller shutters: Delivered separately or fitted to window. Can be combined with fly screen.

Fly screens: Available with friction-fit, turn or sliding frames, or pull-down roller mechanism. Can be combined with sun protection options.

Pleated fly screen: Space-saving and perfect retrofit solution, suitable for lift & slide doors.

Window shutters: Made from aluminium, available in many designs. Can be combined with fly screen.

RAFFSTORE EXTERNAL BLINDS

AVOID OVERHEATING. REDUCE COSTS.

Did you know that smart controlled raffstores can reduce room temperature in summer by up to 10°C compared to unshaded rooms?

Particularly on south-facing rooms it is important to include shading to large areas of glazing to avoid overheating during the summer months. Modern raffstore systems can be integrated into Smart Home systems and help to control solar radiation and light transmission, therefore contributing to passive cooling in summer and solar heating in winter.

Up to 50% less cooling energy

Did you know that cooling a room by 1°C with air conditioning uses three times more energy than increasing heating by 1°C.

Up to 30% less energy consumption

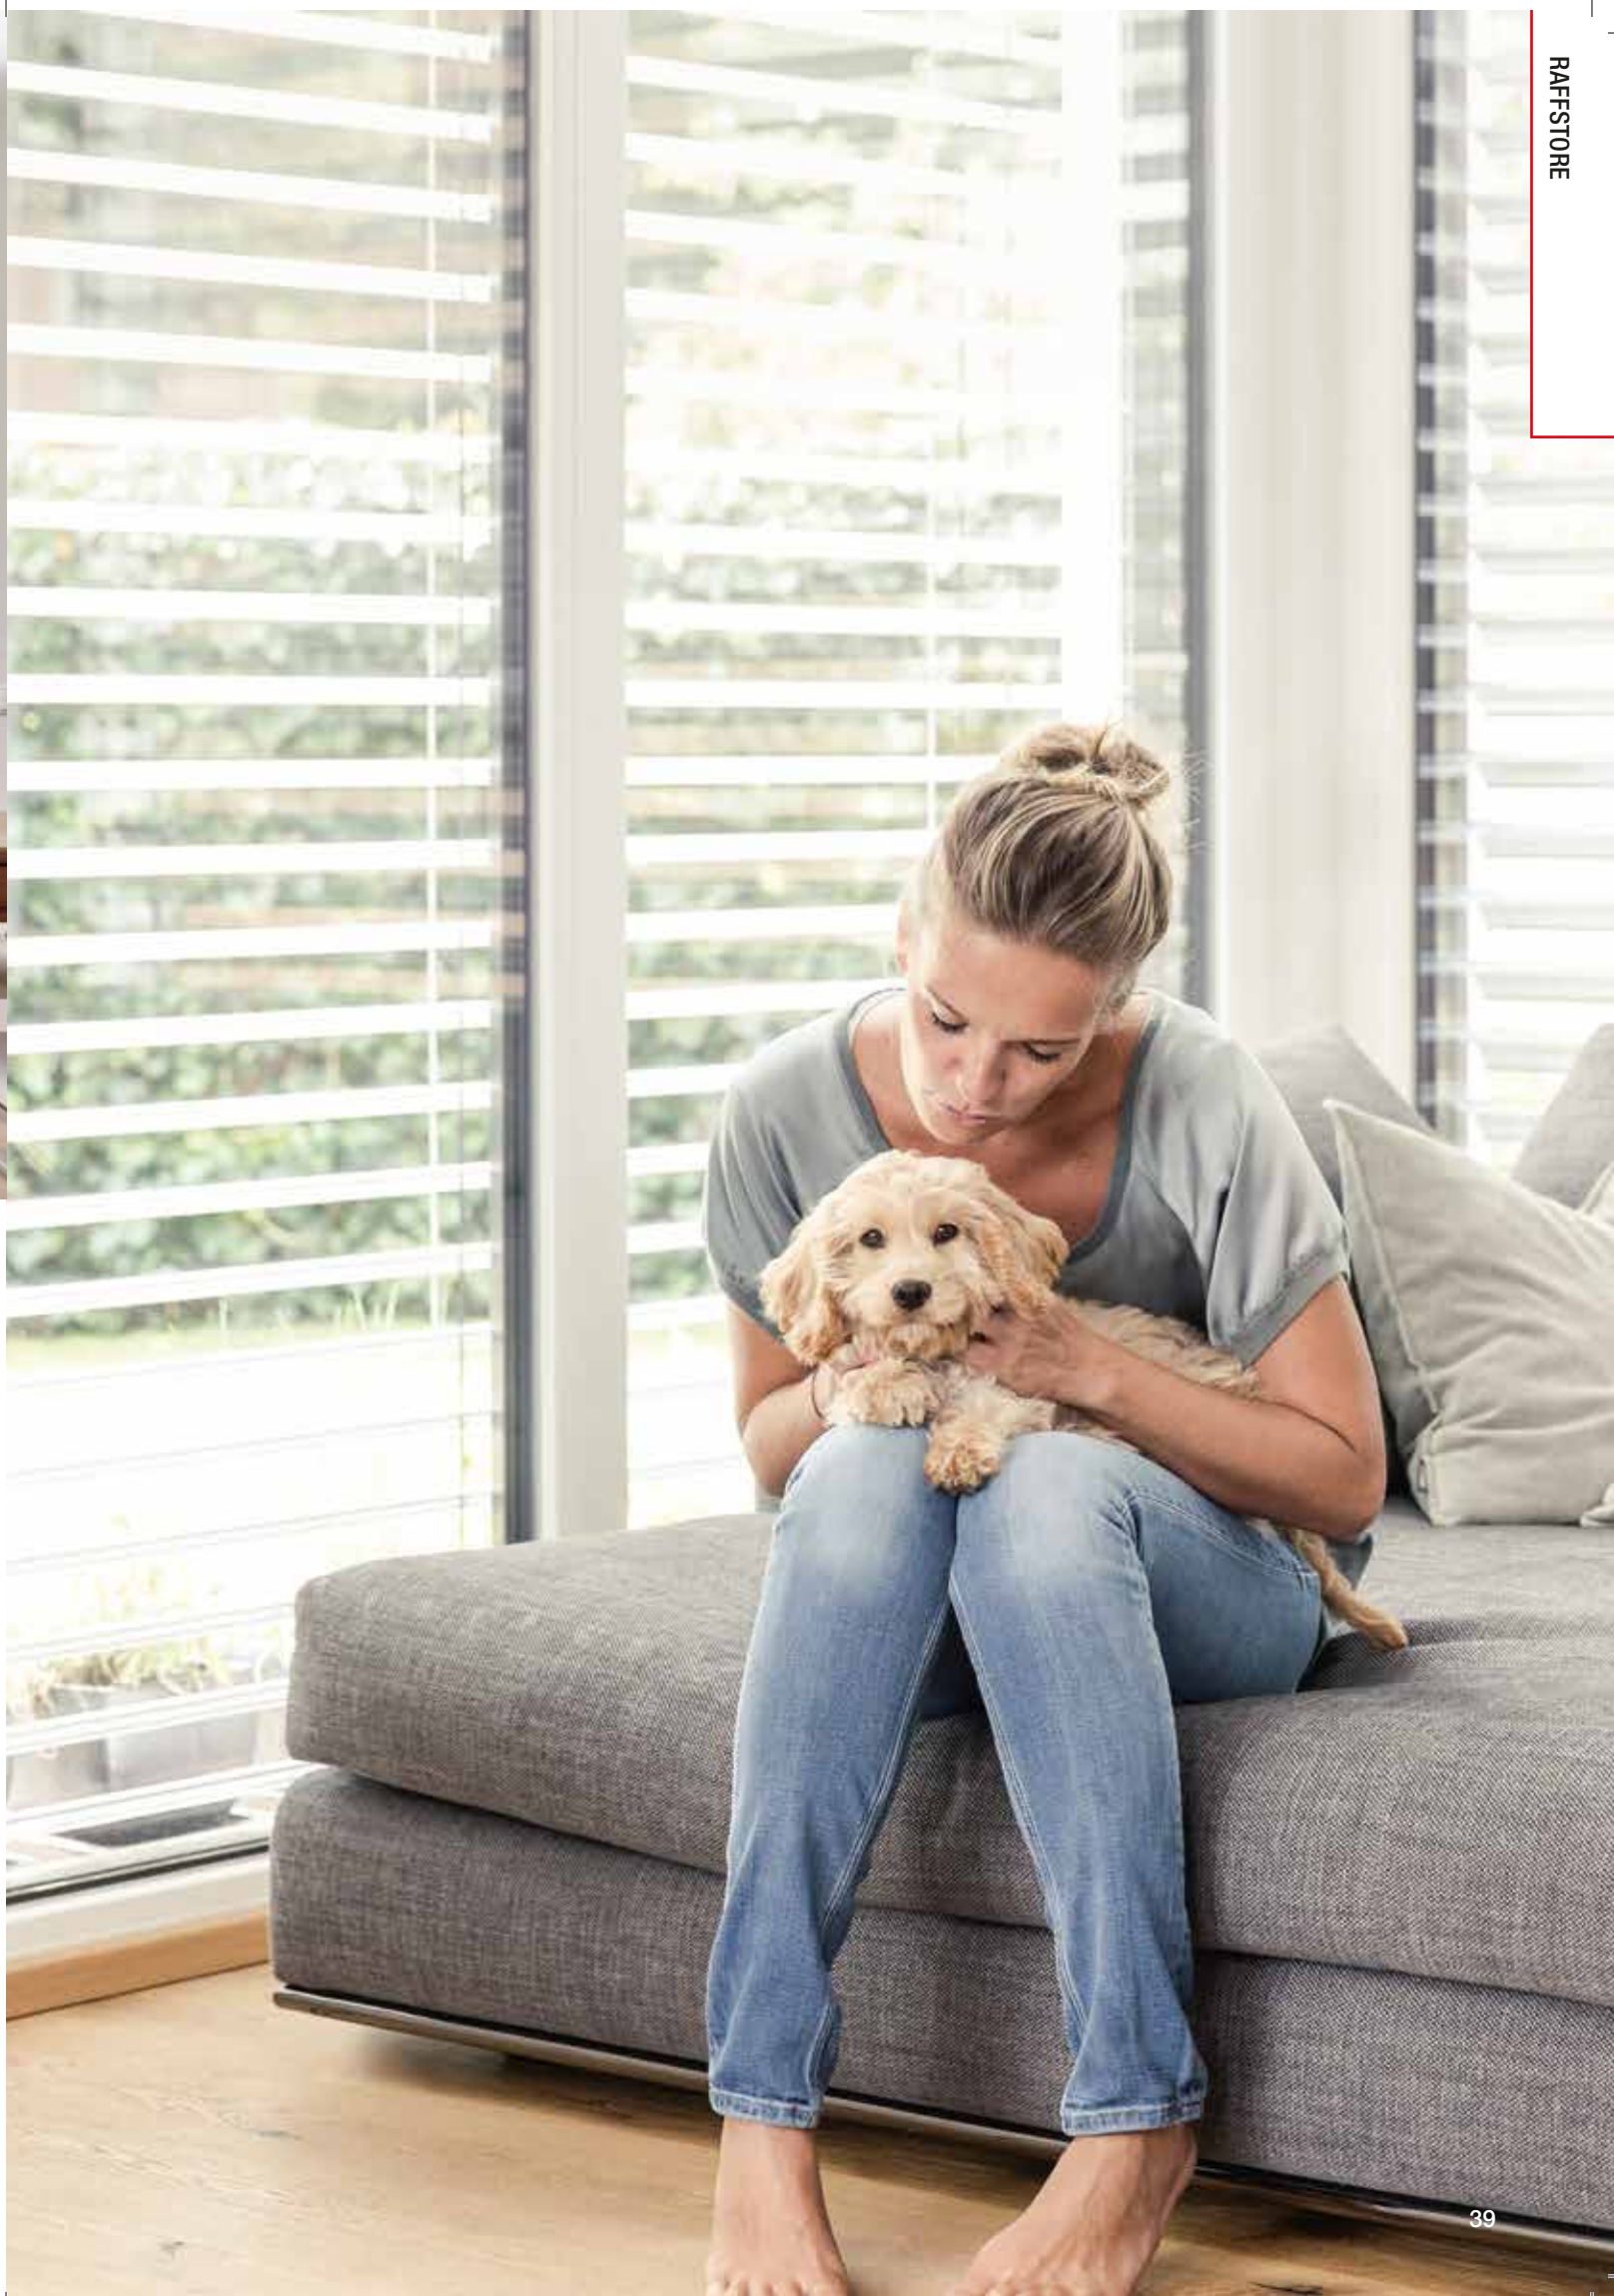

Smart controlled raffstores considerably reduce energy consumption by passive cooling and solar heating.

Reduce electricity costs by up to 80% by not using artificial lighting

Raffstore allow you to control the amount of sun entering your home and the specially designed slats effectively direct daylight into the interior.

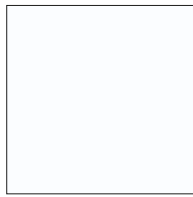

Up to 8.5 tonnes of CO₂ saved

One raffstore can save about 8.5 tonnes of CO₂ in its lifetime. The manufacture, use and disposal of a raffstore only creates around 150kg of CO₂.

ROMAN BLINDS

I-TEC INNOVATIONS

NEW STANDARDS FROM INTERNORM.

Under the heading **I-tec**, Internorm has been developing a series of revolutionary, innovative technologies to meet the increasing demands on design, technology, quality and comfort.

- **I-tec Secure**
- **I-tec Core**
- **I-tec Shading**
- **I-tec Glazing**
- **I-tec Insulation**
- **I-tec Connect**

Discover Internorm's innovative technologies and find out why I-tec is so unique.

I-tec Secure

FEEL SAFE

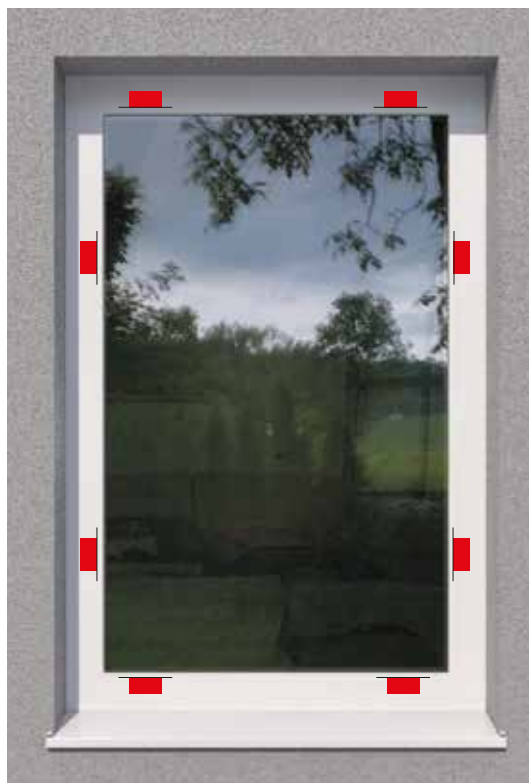

UNRIVALLED, FULLY INTEGRATED
LOCKING UP TO RC3

ADVANTAGES

- Enhanced security up to RC3 available, achievable with integrated flaps
- Levering of window is practically impossible
- Clean look as locking hardware is concealed
- Easy to clean window frame
- Modern glass architecture with slim sightlines

Feeling safe and secure in your home is paramount. The unrivalled I-tec Secure locking system ensures that your windows provide reliable protection. The customary locking pegs are replaced by flaps that securely lock the window sash to the frame, making levering of the window practically impossible. The concealed hardware makes cleaning the windows easier.

I-tec Secure is integrated into the new KF 510 and KF 520 uPVC and uPVC-Aluminium systems. It can reach security class RC2N with an optional lockable handle and is available up to security class RC3 on request.

Discover more about I-tec Secure
uk.internorm.com/i-tec-innovations/i-tec-secure/

I-tec Core

STRENGTH AND STABILITY

WIDE SELECTION OF TIMBER OPTIONS

ADVANTAGES

- Highly stable core in window frame and sash
- Slim sightlines for more light
- Match timber types and colours to your interior – large choice of colours and timbers
- Attractive price-performance ratio
- Option to match windows and lift & slide doors.

With I-tec Core, Internorm windows are able to achieve high stability and strength. The thin laminated layers of timber

are exceptionally resistant, durable and strong, enabling the manufacture of large windows and lift & slide doors. This high-tech material is sustainable, and due to its strength, suitable for large dimensions. The wide choice of timber, such as spruce, larch, oak, ash and walnut, used on the inside of our windows and lift & slide doors, can be matched to your individual interior decoration, furniture, flooring and doors.

Discover more about I-tec Core
uk.internorm.com/i-tec-innovations/i-tec-core/

Discover more about the I-tec Shading.
uk.internorm.com/i-tec-innovations/i-tec-shading/

I-tec Shading

SOLAR POWERED

SELF-SUFFICIENT SUN PROTECTION

ADVANTAGES

- No electricity needed due to the photovoltaic module
- Use of energy gain in winter – reduction of heating costs
- Automatic functions such as day/night recognition and measuring of solar irradiation
- Manual control available directly at the window frame
- Convenient control also available via Smart Home solutions
- Photovoltaic module and sun protection integrated between glass panes

The clever I-tec Shading is the perfect solution for adding sun protection and privacy and to stop overheating. The energy required to operate the integrated blind is generated by a photovoltaic module or solar panel. No hard wiring is necessary as the unit is totally self contained within the window. Available as Venetian, Roman or Duette option, the blind can be operated via a remote control or integrated into a Smart Home system. Available with KV and HV window systems.

I-tec Glazing I-tec Insulation

CONTINUOUSLY EFFICIENT

SAFETY ALL AROUND

ADVANTAGES

I-TEC GLAZING

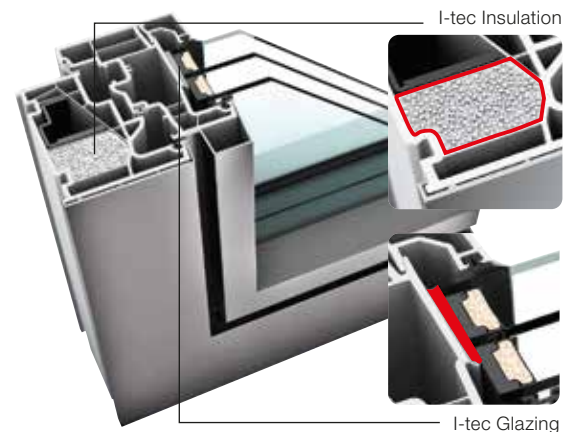

- Maximum burglary protection
- Increased stability
- Increased thermal insulation
- Improved noise reduction

I-TEC INSULATION

- Granulate instead of foam
- Improved thermal insulation
- Hollow chambers filled on all sides

To ensure maximum security, Internorm windows are fitted with **I-tec Glazing** as standard. This technology means that glass panes are glued to the sash all the way round. This considerably improves stability, thermal insulation, noise reduction and burglary protection.

I-tec Insulation is standard for three Internorm window systems: KF 410, KF 510 and KV 440. A granulate is pushed into the hollow chambers under pressure and therefore completely fills them all the way round. I-tec Insulation provides considerable improvement in thermal insulation.

Discover more about these I-tec innovations.
uk.internorm.com/i-tec-innovations/i-tec-glazing/

Discover more about I-tec Connect.
uk.internorm.com/i-tec-innovations/i-tec-connect/

I-tec Connect

SMART HOME READY

CONTROL AT YOUR FINGERTIPS

ADVANTAGES

- Intelligent control around the window
- Mobile operation of I-tec Ventilation, I-tec Shading, and fanlights
- Opening monitoring of your windows
- Direct integration into central SmartHome solutions

Whether you are at home or on the road, intelligent automation allows you to control heating, lighting, audio, security, shading, and much more.

I-tec Connect offers a range of intelligent window products that can be integrated into a Smart Home system. Window opening monitoring, I-tec Ventilation, I-tec Shading, blinds or fanlights can be operated via an app on your smartphone or tablet. A simple finger tap will open or close blinds, adjust the light control or regulate the airflow of the ventilation. Even the electric Comfort Drive on a lift & slide door can be connected to your home network via your Wifi hub.

ECLAZ® THE PREMIUM GLASS COATING

NOW IN EVERY INTERNORM WINDOW

Unlike artificial light, sunlight does not just create a brighter environment, the colour spectrum also has positive and uplifting biological and psychological effects that can impact your health and wellbeing of humans.

Improve natural daylight transmission with ECLAZ® premium glass coating

To allow even more natural light to flood your home, Internorm offers the premium ECLAZ® glass coating as standard across its whole product range.

COMPARED TO CONVENTIONAL GLASS, ECLAZ® OFFERS:

More light & transparency

- The special coating allows more daylight to enter the interior, therefore making it brighter and friendlier.
- Enjoy a clearer view of the outside. The external reflection or mirror effect is also low and the glass is colour-neutral from the outside.

Improved health & productivity

- ECLAZ® helps to regulate your inner balance. Blue light from the sun helps to regulate your natural sleep and wake cycle, elevate moods and increase the feeling of well being.
- It also helps to boost alertness, improve productivity and learning.

Increased happiness & well-being

- Daylight has a balanced light spectrum and regulates the serotonin balance, which is responsible for well-being and life energy. Halogen bulbs, fluorescent tubes and LEDs lack these important light frequencies. ECLAZ® floods the house with daylight.
- 77% more light transmission of triple glazing with ECLAZ® helps to boost health and well-being, especially in the darker autumn and winter months.

Better energy efficiency & higher cost savings

- Less heat loss: ECLAZ® provides excellent thermal insulation, therefore reducing heating costs.
- Greater energy savings: 60% improvement in solar gain with triple glazing resulting in lower heating costs and higher energy efficiency.

Get more as standard

- ECLAZ® is fitted as standard in every Internorm window.
- No additional costs. You enjoy the benefits of this premium glass coating without having to pay more.

FEEL SAFE AND SECURE

RELIABLE. EFFECTIVE. PATENTED.

To feel safe and secure in your own home, burglary protection as well as maximum security for children are fundamental requirements. Quality windows largely contribute to this feeling of safety and with the proven technologies from Internorm, you can protect your family and make it difficult for intruders to enter your home.

Security locking elements

All Internorm window systems are equipped with standard security hardware. Solid, yet discreet silver designer locking elements, together with octagonal mushroom cams in the frame, provide secure locking (except KF 510 and KF 520).

I-tec Secure (KF 510 and KF 520)

Internorm's revolutionary locking technology guarantees maximum protection. When locking the window, flaps open and press into the frame on all sides, making it virtually impossible to lever the window.

Security handle

The new Secustik® window handle contain a jamming-device which provides integrated security. This makes it more difficult to move the window fitting unlawfully from outside. (standard on KF 510 and KF 520 uPVC and uPVC-aluminium windows).

Lockable handles

Lockable handles offer optimal security for use by children as well as burglary protection. The window is locked with a key and cannot be opened from the inside or outside.

Concealed hardware

Concealed hardware prevents windows from being levered out of their hinges, with the added benefit of making windows look neat and easy to clean.

I-tec Glazing

Thanks to Internorm's patented glazing technology, the glass pane cannot be pushed out. The glass is glued into the frame all the way round, making it more secure and stable.

Most Internorm window systems include this I-tec innovation as standard.

Electronic opening detector

Discreet and reliable, these hard wired or wireless locking sensors report whether windows or French doors are open, tilted or locked.

Laminated glass

Unlike standard glass, laminated glass does not shatter when broken. A tough interlayer bonded between two glass panes ensures that the glass stays in the frame and does not cause injury.

Please note that not every colour is available for every window.

Due to printing and manufacturing technology colour deviations between illustrations and original products may occur.

Your Internorm partner will be happy to show you original colour samples.

Aluminium cladding

STANDARD COLOURS*

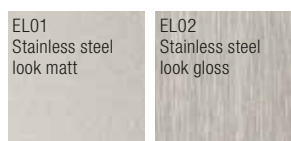

hirest-COLOURS***

HDS COLOURS**

STAINLESS STEEL COLOURS

* **Highly weather-resistant**, except M916 (facade quality).

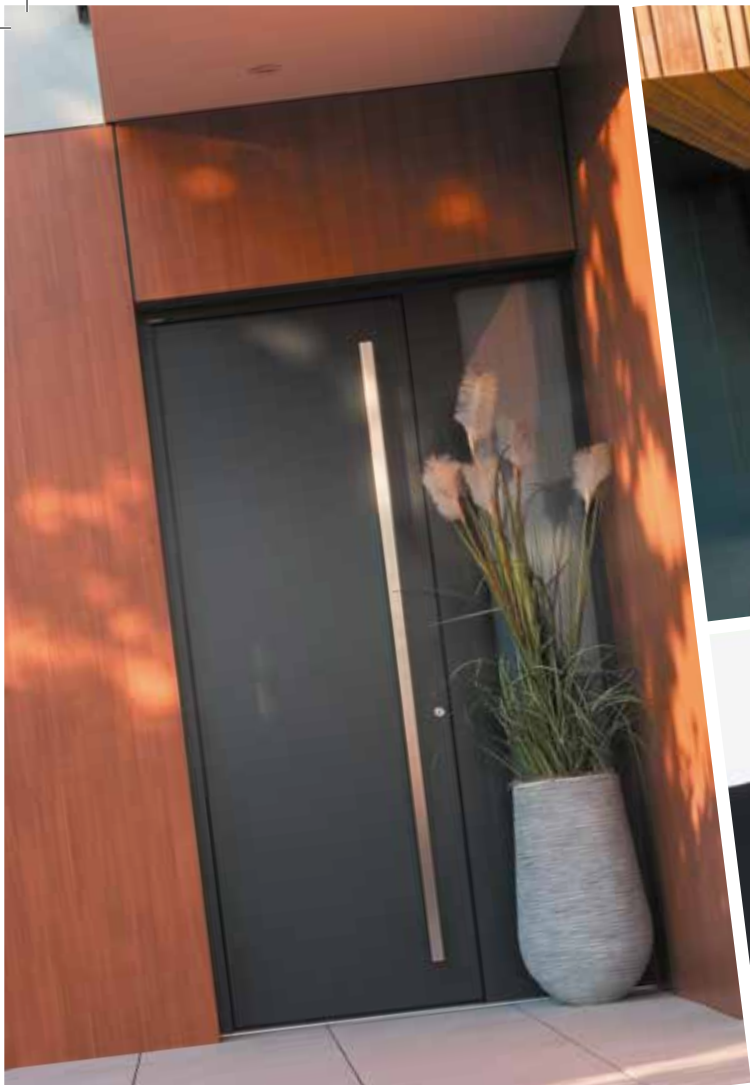

** Intensive colour, variation possible.

*** For surface options **HM** (highly weather-resistant standard colour), **HF** (highly weather-resistant fine structure), **HFM** (highly weather-resistant fine structure metallic), a special highly weather-resistant powder coating is used.

Please note

SPECIAL COLOURS

The Internorm RAL colour range (facade quality) offers even more options. These colours are available for external aluminium cladding and internal timber.

ENTRANCE DOORS

BESPOKE AND INDIVIDUAL

Make a statement with a stylish entrance

Each Internorm entrance door is created to your individual requirements. Choose from different designs, colours, finishes, handles and glass options. You can even add a fingerprint scanner and link your entrance door to your Smart Home system - the choice is yours.

To make it even easier for you to decide on the perfect door for your home, use our great **Door Designer** tool on our website - simply scan the QR code below and get creative! You can upload an image of the front of your house and design your Internorm entrance door to suit any architectural style.

Your local Internorm partner will also be happy to assist.

BALANCED & STRUCTURED

This extensive range of doors impresses with its simplicity and symmetry. Whether you opt for a full length slim glass window or prefer perfectly aligned smaller windows in the centre or the side, the choice is yours.

To create an even more individual entrance door, you have the option to add milled grooves or decorative trims.

WOW EFFECT

Tactile ceramic surfaces create cutting edge entrance doors. They become a focal point within any architectural style.

COLOURS

Please note that not every colour is available for every door, frame or door sash.

Due to printing and manufacturing technology, colour and surface deviations between illustration and original products may occur.

Your **Internorm partner** will be happy to show you original colour samples.

* **Highly weather resistant**, except M916 (facade quality).

** Intensive colour appearance, variation possible.

*** For surface options **HM** (highly weather-resistant standard colour), **HF** (highly weather-resistant fine structure), **HFM** (highly weather-resistant fine structure metallic), a special highly weather-resistant powder coating is used.

YOUR FINGER IS THE KEY

No more tedious searching for keys, thanks to fingerprint scanners or keypads. At Internorm, these intelligent systems are attached to or integrated flush into the door sash or handle.

FINGERPRINT SCANNER

The integrated, new generation 'ekey-dLine' fingerprint scanner conveniently replaces conventional keys. The control unit is space-saving and securely housed in the door sash or handle. Keys, cards, or codes are no longer forgotten, lost or stolen.

Simple. You open the door with just your finger via the ekey-bionyx App. There is no need for a technician – you are in control. The intelligent software learns with every use and recognises children's growing fingers or changes in user habits.

Secure. Your unique fingerprint is more secure than a key, which can be lost or stolen. Manipulation of the system from the outside and unauthorised use is made impossible.

'Smart' entrance door. The system can be integrated into your Smart Home system via Wifi and therefore offers countless features, including remote opening or push notifications when door is being opened. Even a quick 'Alexa, open the door' will activate it if you are tied up. The programming and management of the fingerprint scanner is via smartphone or tablet. The Bluetooth connection is secured by a 6-digit coupling code. Suitable for Apple and Android mobile phones or tablets.

KEYPAD

A more traditional option for securely entering your home is a keypad. The slim and smart ekey home integra keypad is installed directly into the door sash or in the wall next to the door. The system is compatible with all E-openers and motorised locks. A cable transports the encrypted opening signal to an electronic relay. The relay sends the opening impulse to the motor lock. The system cannot be manipulated from the outside.

The lock is opened by your individual four to ten-digit code. The touch-sensitive pad can even remember a pattern just like on a mobile phone.

Up to 99 codes can be programmed and each user will have their own access code. You can manage and limit the access of individuals to certain times or days, for example cleaners.

Additional security features, such as the Winkhaus high security cylinder, door restrictor, electric door opening/ETOE and chrome spy hole are available on request from your Internorm partner.

SIDE ENTRANCE DOORS

Side entrance doors serve to close off unused, unheated rooms (e.g. garage, basement storage rooms). Current statistics show that intruders predominantly gain access to a house via side and back entrances. It is therefore all the more important to consider relevant security features – Internorm offers different security systems upon request.

Side entrance doors are available in timber-aluminium, aluminium and uPVC and offer a wide range of individual design options.

WARRANTIES

OUR WARRANTIES ENSURE THAT YOU CAN ENJOY YOUR INTERNORM PRODUCTS FOR MANY YEARS TO COME.

As the leading European, internationally active, window brand with 91 years of experience, Internorm is focused on developing innovative, exceptionally high quality and reliable window and door solutions. That's our guarantee.

Warranty

15
YEARS

- Against condensation between the sealed panes of insulating glass, if the glass is not heavier than 80kg.

Warranty

10
YEARS

- On weather resistance against unnatural change of colour and cracks in surfaces of:
 - white uPVC window and door profiles, except for mitre cracks.
 - inside foil covered uPVC window and door profiles, except for mitre cracks.
 - anodised (a form of metal coating) or powder coated aluminium window and door profiles.
- Against condensation between the sealed panes of insulating glass.
- On the glue connection of glued Georgian/feature bars.
- On the function of the material compound timber, thermal foam and aluminium profiles in timber aluminium composite products when adhering to the Internorm fitting and maintenance guidelines.
- On the function of the glued connection and sealing of the insulating glass panes with window profiles in timber aluminium composite products when adhering to the Internorm fitting and maintenance guidelines.
- Where goods are supplied with marine grade aluminium finish.

Warranty

5
YEARS

- For PVD coated entrance door handles against corrosion, if no mechanical damage is apparent.
- On weather resistance against unnatural colour changes or cracks in door filling surfaces.

Warranty

3
YEARS

- On weather resistance against unnatural change of colour and cracks in surfaces of anodised or powder coated aluminium roller shutters, blinds and window shutter profiles.
- On the function of window and door hardware when the Internorm fitting and maintenance guidelines have been followed.
- On weather resistance against unnatural change of colour and cracks in surfaces of uPVC roller shutter profiles.

Product
Availability
Warranty

30
YEARS

Internorm guarantees that our Goods manufactured from 1999 onwards are capable of being repaired by our specialists in such a way that their full functionality is guaranteed to subsist or be retained over a time period of 30 years. However, this is subject to the construction (i.e. frames and sashes) remaining undamaged and subject to the customer paying our costs of repair, where applicable. The 30-year period begins with the Internorm production date, confirmation of which will be provided on request. The services or materials, labour time etc., necessary to retain functionality will be charged at respective current rates.

WARRANTIES/EXTRACT:

The full version of our warranty information, warranty requirements and how to make a warranty claim, can be found in the Internorm Maintenance, Care and Warranties Manual. This Manual is delivered together with your Internorm products. It is additionally available as a PDF from the Download section of our website, and available from every **Internorm distribution partner**.

NATIONAL AND INTERNATIONAL CERTIFICATIONS CONFIRM THE HIGH QUALITY OF OUR PRODUCTS.

Internorm's wealth of experience and focus on innovative technical solutions ensure that you receive the best product and service. High-tech production facilities and the strictest quality controls ensure that the our product quality sets industry standards. Prestigious awards and certifications from leading European test institutes confirm this.

AN ESTABLISHED INTERNATIONAL FAMILY BUSINESS

EUROPE'S NO. 1 WINDOW BRAND

Thank you for your interest in Internorm products. Internorm has been a family business for 91 years, having developed from a one-man blacksmith's shop to the largest internationally active window brand.

During this time we have manufactured over 27 million window and door units, all 100% made in our production facilities in Traun, Sarleinsbach and Lannach in Austria. From the creation of the uPVC window and the production of the timber-aluminium window to today's high-tech and ultra-modern design innovations, our family company has been setting standards across Europe. We are pioneers in our field and continue to further develop technology and innovative ideas.

Our 1974-strong European work force are specialists, who thrive on attention to detail and act with passion and integrity. Together with more than 1300 distribution partners in 21 countries we guarantee product quality and the highest levels of service.
